

ML Hackathon — Network Intrusion Detection

Participant Quick Submission Guide — Challenge Dataset

OFFICIAL SUBMISSION FORM: Upload your zipped folder to Google Drive and submit the link here:

<https://forms.gle/9UyWREUSkioJ3urV9>

(Please ensure your Google Drive link permission is set to: **'Anyone with the link can view / download'**)

1. What to Submit (Only 2 Files)

To keep the submission process as smooth and simple as possible, you do not need complex inference scripts or metadata descriptors. Put just these **two files** into a folder named `<team_name>_submission/` and zip it:

File Name	Required?	What it is & Instructions
challenge_predictions.csv	Yes	Your predictions generated for the challenge.csv dataset. Expected columns: row_id,prediction,probability (see format below).
model.joblib (or model.pkl)	Yes	Your saved trained model artifact (e.g. from joblib.dump() or pickle.dump()). Organizers will verify your model using this file.

2. Prediction CSV Format (challenge_predictions.csv)

The challenge.csv file contains 254,005 network flows. Format your prediction CSV as follows:

Column Name	Type	Values	Description
row_id	Integer	1 to 254005	1-based sequential row identifier matching the record order of challenge.csv.
prediction	Integer	0 or 1	Classification: 0 = Normal / Benign traffic, 1 = Cyber Attack.
probability	Float	0.0 to 1.0	Estimated attack probability. Recommended for PR-AUC and calibration ranking.

Exact CSV Sample (First 5 lines):

```
row_id,prediction,probability
1,0,0.001385
2,0,0.002150
3,1,0.894200
4,0,0.012500
```

* Note on row counts: Don't worry if there are minor discrepancies in row count — the evaluation system automatically aligns predictions using row_id and safely applies fallback defaults for any missing rows.

3. How to Submit in 3 Easy Steps

Step 1 — Put both files in a folder:

Create a folder named `<team_name>_submission/` containing challenge_predictions.csv and model.joblib.

Step 2 — Compress the folder:

Zip the folder to create `<team_name>_submission.zip`.

Step 3 — Upload to Google Drive and submit:

Upload your .zip to Google Drive, ensure link sharing is set to **'Anyone with the link can view / download'**, and paste the link into the Google Form: <https://forms.gle/9UyWREUSkioJ3urV9>.
